

PRESS INFORMATION:

**INTERNATIONAL EXPERTS WILL EXPOSE IN ALICANTE THE LAST
ADVANCES IN PRODUCTION OF FUELS FROM ALGAE**

The International Congress Bio-mass and Biofuels production from Algae Oil, organized by the University of Alicante and Global Energy, has presented its complete program conferences. Investigators and businessmen recognized internationally will debate on the real and effective viability of the product consider by many people to be "a real substitute of the oil": the algae.

The congress will be formed by twelve conferences presented by some of the most recognized expert in the matter. Investigators and businessmen with wide experience will approach in depth not only the scientific side but, also, the technical possibilities and the economic viability of projects on micro and macro algae for the production of bio-diesel and bio-ethanol.

Important scientists like Anastasios Melis of Berkeley's University (California), international expert in the study of the algae like producers of hydrogen for generation of electricity, John Munford, british independent scientist, or the spanish Eduardo Ferrandis and Cristian Gomis will announce theirs last discoveries. The doctor Ferrandis is the director of the investigations realized at the University of Alicante, top center in this topic, and Cristian Gomis is the scientific director of the spanish company BFS, the first company in the world in producing bio-oil from algae.

The business vision is completed by the representatives of companies as Biofields (Mexico), Origin Oil Inc. (USA) or Oil Fox S.A. (Argentina). Also there will be present companies who offer services of advising or financial consultancy to this sector like the dutch multinational Kema Energy Consulting.

Finally, the environmental protection will be specially reflected in the conferece of the Spanish representation of the Program Against the Climatic Change directed by Al Gore.

The International Congress Bio-mass and Biofuels production from Algae Oil, that expects an assistance of more than 250 congress members, will take place in the University of Alicante, during October, 2008. The only occasion to know the real and effective viability of the product consider by many people to be "a real substitute of the oil": the algae.
